GitHub: github.com/Kuya-Rivz Facebook: facebook.com/jj.rivas13

PROFESSIONAL SUMMARY

An enthusiastic and motivated Information Technology student specializing in responsive user interface layout architectures and clean web styling methodologies. Strongly focused on frontend structures, DOM element manipulation, version control via Git workflows, and dynamic interactivity scripting. Seeking to leverage academic laboratory success and sandbox project accomplishments into an entry-level development or internship role.

TECHNICAL PROFICIENCIES

Frontend Development

HTML5, CSS3, JavaScript (DOM Manipulation, Asynchronous Patterns)

Database & Back-end Basics

SQL Queries, MySQL Databases, Structural PHP Integration

Design & UI/UX Layouts

Figma Workspace, Responsive Grid Layouts, Mobile-First Web Design

Version Control & Hardware

Git, GitHub Versioning, Computer Systems Servicing Foundations

ACADEMIC PROJECTS PORTFOLIO

Simple Inventory Management System Dashboard

Featured Project

Academic Sandbox Application

Engineered an API-driven dashboard tracking real-time operations using asynchronous JavaScript logic patterns. Integrated Fetch API frameworks to query third-party endpoints and seamlessly structured lightweight UI layouts for dynamic component rendering.

Technologies Used: React JS, Tailwind CSS, Async JavaScript

Dynamic E-Portfolio Platform

Midterm Project

Responsive Personal Development Project

Developed a semantic personal portfolio showcasing responsive multi-viewport break points. Implemented a data-attribute theme controller for system-wide light/dark modes, custom programmatic scroll bounds, and structured form text fields utilizing explicit client-side verification logic scripts.

Technologies Used: HTML5, Custom CSS Variables, Event Listeners

Interactive Calculation Framework

Laboratory Project

Core Logic Application

Designed and hosted an accessible user-facing arithmetic computation canvas focused on fundamental computer state management, custom button triggers, and standard semantic interface layouts.

Technologies Used: HTML5, CSS3, DOM JavaScript

EDUCATION

Bachelor of Science in Information Technology

2023 – Present

Cavite State University (Course Track: DCIT 26)

Directing academic focus towards interface design engineering, structural stylesheet management, interactive script automation, and full-viewport adaptation workflows.

Senior High School – ICT (Computer Systems Servicing)

2018 – 2020

Carolina National High School

Technical-Vocational path emphasizing hardware logic configuration, diagnostic standard installations, and operational runtime setup tasks.
